Kiosk Floating Button

Overview

The **Kiosk Floating Buttons** section allows administrators to create and manage floating action buttons displayed on the kiosk interface. These buttons provide quick access to frequently used features and can be positioned anywhere on the screen by configuring their **X** and **Y** coordinates.

Navigate to **VirtuKiosk → Kiosk Floating Buttons** to manage floating buttons.

Add Floating Button

To create a new floating button:

1. Navigate to **VirtuKiosk → Kiosk Floating Buttons**.
2. Click **Add Floating Button**.
3. Select the required **Button Type**.
4. Configure the **X** and **Y** position.
5. Click **Submit** to save the button.

Floating Button Types

The following floating button types are available:

Button Type	Description
Logo	Displays the company or application logo as a floating button.
Facility	Opens the configured facility or services section.
Home	Navigates directly to the kiosk home screen.
Search	Opens the product search interface.
Cart	Opens the shopping cart.

Button Type	Description
Dynamic Cart	Displays a dynamic cart button based on the current cart status.
Dynamic QR	Displays a QR Code dynamically for supported workflows.
Dynamic TryOn	Opens the TryOn feature for supported fashion products.

Button Position

Each floating button can be positioned anywhere on the kiosk screen.

Setting	Description
X (%)	Defines the horizontal position of the floating button.
Y (%)	Defines the vertical position of the floating button.

The position is configured using percentage values, allowing the button to be placed anywhere on the screen.

Manage Floating Buttons

Administrators can:

- Add new floating buttons.
- Select different button types.
- Configure button positions.
- Edit existing floating buttons.
- Delete unused floating buttons.

Best Practices

- Position buttons where they are easily accessible without blocking important content.
- Use only the required floating buttons to maintain a clean interface.
- Test button placement on the target kiosk screen before deployment.
- Verify that each button performs the intended action.

> **Important:**
> Floating Buttons provide quick access to important kiosk features. Configure the **Button Type** and adjust the **X** and **Y** position to place the button at the desired location on the kiosk interface.
