Organize (App Contents)

Overview

The **Sort Catalog Contents** feature allows administrators to automatically sort all products and categories within the catalog. This helps maintain a consistent and organized catalog structure by arranging items alphabetically based on their names.

Sort Catalog Contents

The **Sort Catalog Contents** option reorganizes the entire catalog by sorting all available products and categories according to their names.

> **Important:** This operation applies to the complete catalog and replaces any custom ordering that was previously configured.

Alert

> ⚠ **Warning**
>
> Performing this action will sort all products and categories alphabetically by their names.
>
> - Any manual or custom ordering configured previously will be removed.
> - This operation affects the entire catalog.
> - Once the sorting process is completed, the previous order **cannot be restored automatically**.

> **Update:** Use this feature only when you want to standardize the catalog order across the entire application.

Best Practices

- Verify the existing catalog order before performing the sorting operation.
- Use this feature only when alphabetical ordering is required.
- Avoid running this action if custom product or category ordering is currently in use.
- Inform other administrators before applying the changes, as the operation affects the complete catalog.

> **Update:** Following these recommendations helps prevent accidental changes to the catalog structure and ensures a consistent browsing experience.
