Product (App resources)

Overview

The **Manage Resources** section allows users to manage and maintain app resources linked with products. Users can add and manage resource details such as product name, resource information, URL, and availability status.

Navigation

Home → Manage App → Resources

App Resources

The **App Resources** page displays all available resources associated with products. Users can manage product-related resources that can be accessed through the application.

Manage App Resources

To manage app resources:

1. Open the **Resources** section.
2. View the available resource list.
3. Add or update resource details as required.
4. Save the changes after adding or updating resource information.

The resources added here will be available for the respective products in the application.

App Resources List

The App Resources page contains the following details:

Field	Description
Product	Displays the product associated with the resource.
Resource	Displays the name or details of the resource.
URL	Displays the resource URL or link.
Available	Shows whether the resource is available or active.

Available Actions

- **Search:** Allows users to search for a specific resource.
- **Show Entries:** Allows users to select the number of records displayed in the list.
- **Add/Update:** Allows users to add new resources or modify existing resource details.
- **Save:** Saves the added or updated resource information.

Resource Availability

The **Available** status indicates whether the resource is accessible for the associated product in the application.

- If the resource is available, it will be displayed and accessible.
- If the resource is unavailable, it will not be shown in the application.

Resource List Example

Product	Resource	URL	Available
No data available
