Script (Script Responses)

Overview

The **Script Responses (Live)** section displays all responses generated by scripts in real time. Whenever a script is executed from the Kiosk or another supported source, its response is automatically recorded and made available for monitoring.

This section helps administrators track script execution, verify response details, analyze generated data, and troubleshoot script-related issues.

Script Responses

Navigate to **Modules → Scripts → Script Responses (Live)** to view all recorded script responses.

Each response contains important execution details and provides quick access to the complete response information.

Response Details

The Script Responses table displays the following information:

Column	Description
#	Serial number of the response.
Response ID	Unique identifier generated for each script response.
Response Code	Unique code generated after successful execution.
Script	Name of the executed script.
Source	Displays the source from which the script was executed (e.g., Kiosk App Android).
Time	Indicates when the response was received.
Action	Provides options to view or download the response.

View Script Response

Clicking the **View/Open** option from the **Action** menu opens the complete response details for the selected script.

The response page contains the following information:

Field	Description
Script Title	Displays the name of the executed script.
Script Published At	Shows the date and time when the script was published.
Response ID	Unique identifier assigned to the response.
Response Code	Generated response code for the execution.
Response Receiving Time	Time when the application received the response.
Response Submission Time	Time when the response was submitted by the source.
Response Source	Displays the platform or device that executed the script (e.g., Kiosk App Android).
Script Response	Displays all response data in **Key–Value** format for easy analysis and debugging.

Response Actions

Using the **Action** menu, administrators can:

- View complete response details.
- Open the response information page.
- Download the response for reporting or troubleshooting.

Search Responses

The **Search** field allows administrators to quickly find responses using:

- Response ID
- Response Code
- Script Name

The **Show Entries** option controls the number of records displayed on each page.

Manage Script Responses

Administrators can:

- Monitor live script executions.
- View complete response information.
- Verify response codes.
- Review execution timestamps.
- Check the response source.
- Analyze Key–Value response data.
- Download response records for future reference.

Best Practices

- Regularly review script responses to ensure scripts are executing successfully.
- Verify the **Response Source** while troubleshooting.
- Compare the **Receiving Time** and **Submission Time** for execution analysis.
- Use downloaded responses for debugging or reporting purposes.
- Monitor the Key–Value response data to validate script output.

> **Important:**
> Every successful script execution generates a unique **Response ID** and **Response Code**. Selecting a response from the list opens detailed execution information, including publication details, timestamps, source, and the complete **Key–Value** response data. Response records can also be downloaded directly from the **Action** menu for further analysis or documentation.
