TryOn (TryOn Settings)

Overview

The **TryOn Settings** section allows administrators to configure the Virtual Try-On experience for fashion products. This feature enables users to virtually wear selected garments by capturing a selfie, providing an interactive and engaging shopping experience.

> **Note:**
> The Try-On feature is specifically designed for supported **Fashion Products**.

How Try-On Works

The Virtual Try-On feature works as follows:

1. The user selects a supported **Fashion Product**.
2. The user captures a **Selfie** using the kiosk or application.
3. The system processes the image using the Try-On engine.
4. The selected garment is digitally applied to the user's image.
5. The generated Try-On image can be shared with the user.

Enable Try-On

The Try-On feature must be enabled from **two different locations** before it becomes available.

1. Product / Package Configuration

Enable **Try-On** for the required Fashion Product from the **Product Package** configuration.

2. TryOn Settings

Enable and configure the required settings from:

Modules → TryOn Settings

> **Important:**
> The Try-On feature will function only after it has been enabled from **both** the Product Package and the TryOn Settings module.

Product TryOn Button

The **Product TryOn Button** controls the appearance of the Try-On button displayed on supported products.

The following options are available:

Setting	Description
Mode	Select the display mode of the Try-On button (e.g., Full).
Text	Enable or disable button text.
Button Text	Customize the text displayed on the button.
Size	Set the font size of the button text.
Text Color	Select the text color using a color code.
Background Color	Select the button background color using a color code.
Animation	Configure button animation, if required.

TryOn Button Labels

Customize the button labels displayed during the Try-On process.

Field	Description
Add to TryOn	Text displayed when adding a product to the Try-On list.
Remove from TryOn	Text displayed when removing a product from the Try-On list.
Empty TryOn Text	Message displayed when no Try-On products are selected.

Field	Description
Open TryOn Text	Text displayed for opening the Try-On interface.

User Profile

The **User Profile** section defines the information collected before generating a Try-On image.

Available fields include:

- **Name**
- **Phone Number**
- **Email Address**

> **Important:**
> The **Phone Number** field must remain **enabled and mandatory**. Without a valid phone number, the generated Try-On image **cannot be sent via WhatsApp**.

Access Permission

The **Try-On Settings** module is a restricted feature.

- Access is **not available to all users**.
- Try-On functionality must be **enabled by the authorized administrator**.
- If the feature is not available in your account, contact **Ashish** to request access and enablement.

> **Note:**
> Only authorized users can configure or enable the Try-On feature.

Best Practices

- Enable Try-On only for supported **Fashion Products**.

- Ensure the feature is enabled in both **Product Package** and **TryOn Settings**.
- Keep the **Phone Number** field enabled to support WhatsApp image delivery.
- Use clear and consistent button labels for a better user experience.
- Verify button colors and animations to match your application's theme before saving.

> **Important:**
> Any changes made within **TryOn Settings** will not take effect until you click the **Submit** button. Ensure all required settings are configured correctly before saving.
