Pages

Overview

The **Pages** section allows users to manage and create pages for their project. Users can view existing pages, navigate between pages, and add new pages based on their requirements.

Access Path

To access the Pages section:

Leftside bar → Pages

Pages Overview

The Pages section provides the following options:

- **Search** – Search for an existing page.
- **Refresh** – Refresh the page list.
- **Add From Template** – Create a new page using an existing template.
- **Add New** – Create a new page manually.
- **Previous / Next** – Navigate between multiple pages when the page list contains more than one page.

The page list displays information such as:

- Page Number
- Page Title
- Page URL
- Copy Page
- Published Status
- Icon
- Web Availability
- App Availability
- Kiosk Availability

Add New Page

To create a new page, click the **Add New** button.

A new **Add New Page** window will appear.

Page Title

Enter the required name of the page in the **Page Title** field.

The page title should be clear and relevant to the content that will be added to the page.

Available For

The **Available For** option allows you to select the platforms where the page should be available.

Select the required platform option based on the intended usage of the page.

Save the Page

After entering the page title and selecting the required availability options:

1. Enter the **Page Title**.
2. Select the required **Available For** option.
3. Click **Save**.
4. The new page will be added to the Pages list.

Page Navigation

When multiple pages are available, use the pagination controls at the bottom of the page list:

- **Previous** – Move to the previous page of the list.
- **Next** – Move to the next page of the list.
- **Page Number** – Select a specific page directly.

Page Management

Once a page is created, it can be managed from the Pages list. The list provides information about its publishing status and availability across different platforms.

The **Copy Page** option can also be used to create a copy of an existing page, which can then be configured separately.
