Basic

Overview

The **VirtuWeb Basic Settings** section provides configuration options for managing the basic behavior and appearance of the VirtuWeb website. It allows users to control the login popup, add custom website metadata and JavaScript, and configure cookie consent messages and button text.

These settings help customize the website according to project requirements and provide greater control over the website's behavior and user experience.

Access Path

- Left Sidebar → Settings → VirtuWeb → Basic

Hide Login Popup

The Hide Login Popup option allows you to control the visibility of the login popup on the VirtuWeb website.

Click Hide Login Popup to hide the login popup. Use this option when the login popup is not required on the website. Website Head Meta

The Website Head Meta field allows you to add custom metadata or supported HTML content to the

section of the website.
Example

Click **Save** to apply the changes.

Website Body JS

The Website Body JS field allows you to add custom JavaScript code to the website body.

Example console.log("GOOD MORNING");

Click **Save** to apply the changes.

Note: Ensure that the added content contains valid JavaScript code.

Website Cookie Consent Message

The Website Cookie Consent Message field allows you to configure the message displayed to users regarding cookie usage.

Example This website uses cookies to improve your browsing experience and provide better services.

Click Save to apply the changes.

Website Cookie Consent Button Text

The Website Cookie Consent Button Text field allows you to customize the text displayed on the cookie consent button.

Example Accept Cookies

Other examples:

Accept Allow Cookies

Click Save to apply the changes.

Configuration Summary

Setting Description Hide Login Popup Controls the visibility of the login popup. Website Head Meta Allows custom metadata or supported HTML content to be added to the website

. Website Body JS Allows custom JavaScript code to be added to the website body. Website Cookie Consent Message Defines the cookie consent message displayed to users. Website Cookie Consent Button Text Customizes the cookie consent button text.
Important: Click Save after making changes to each field to apply the updated configuration.

Website- Header

Overview

The **Website Header** section allows you to configure the website header, navigation menu, and logo text displayed on the web application.

Access Path:

Left Side Bar → Settings → Website Header

Menu

The **Menu** section allows you to create and configure navigation items for the website header.

Add New Item

Click **Add New Item** to create a new menu item.

Type

Select the type of menu item from the available options:

- **Addresses** – Opens the user's saved addresses.
- **Bookmark** – Opens bookmarked content.
- **Cart** – Opens the shopping cart.
- **Google Translate** – Provides language translation options.
- **Home** – Navigates to the home page.
- **List** – Displays the configured list.
- **Login** – Opens the login page.
- **Logout** – Allows the user to log out.
- **Order History** – Opens the user's order history.
- **Page** – Links to a specific page.
- **Profile** – Opens the user's profile.
- **Search** – Opens the search functionality.

Title

Enter the text that should be displayed for the menu item.

Example:

`Home`

Icon

Select or configure an icon for the menu item.

Example:

`Home Icon`

Page

Select the page that should be associated with the menu item.

Example:

`Home Page`

Page Section (#)

Specify the section number of the selected page if the menu item should navigate to a particular section.

Example:

`1`

Target

Select how the menu item should open:

- **Internal** – Opens the destination within the current website.
- **External** – Opens an external URL or destination.

Button

Use the **Button** option to configure the menu item as a button in the website header.

Settings

The **Settings** section provides options for customizing the text displayed in the website header.

App Logo Text

Enter the text that should be displayed as the application logo or branding text.

Example:

```
VirtuBox
```

Web Logo Text

Enter the text that should be displayed as the website logo or branding text.

Example:

```
My Website
```

> **Note:** Configure the menu items and logo text according to the website's navigation and branding requirements.

Website- Footer

Overview

The **Website Footer** section allows you to add and configure footer content using different system layouts and Markdown.

Access Path

Left Side Bar → VirtuWeb → Website Footer

Add Layout

Click the **+** button to add a new footer layout.

Style

Assets

Overview

The **VirtuWeb Assets** section is used to manage assets associated with the VirtuWeb website configuration. It provides an option to add a website favicon, which is displayed in the browser tab or other browser interface areas.

Navigation Path

Navigation Path: VirtuBox → Settings → VirtuWeb → Assets

Website Favicon

The **Website Favicon** section allows users to add a favicon for the website.

Available Options

Option	Description
Website Favicon	Displays the section for managing the website favicon.
Add	Allows users to add a favicon to the website configuration.

How to Add a Website Favicon

Follow these steps to add a website favicon:

1. Open the VirtuBox backend.
2. Navigate to **VirtuWeb → Assets** from the left sidebar.
3. Locate the **Website Favicon** section.
4. Click the **Add** button.
5. Select or upload the required favicon using the interface provided.
6. Complete any additional required steps to save the favicon.

Left Sidebar Navigation

The left sidebar contains multiple configuration sections.

Important Notes

- Add the appropriate favicon to customize the website's browser icon.
- Verify that the favicon has been saved successfully.
- The available fields and upload options may vary depending on the backend configuration.

Conclusion

The **VirtuWeb Assets** section provides an option to add a website favicon and access other website asset settings. Proper configuration helps maintain consistent website branding and presentation.

SEO

Overview

The **VirtuWeb SEO** section provides configuration options for managing website SEO information and URL path redirects. It allows users to configure page metadata, Open Graph details, and redirects between existing and destination paths.

Access Path

Left Sidebar → Settings → VirtuWeb → SEO

SEO Configuration

Title

The **Title** field is used to define the title of the website or page.

Example:

```
VirtuBox - Digital Kiosk Solutions
```

Description

The **Description** field allows you to define a description for the website or page.

Example:

```
Explore VirtuBox digital kiosk solutions and interactive experiences for businesses.
```

Keywords

The **Keywords** field allows you to add relevant keywords associated with the website or page.

Example:

```
digital kiosk, interactive kiosk, VirtuBox, kiosk solutions
```

Open Graph: og:title

The **Open Graph: og:title** field defines the title displayed when the website or page is shared on supported platforms.

Example:

```
VirtuBox - Digital Kiosk Solutions
```

Open Graph: og:description

The **Open Graph: og:description** field defines the description displayed when the website or page is shared on supported platforms.

Example:

```
Discover interactive digital kiosk solutions with VirtuBox.
```

Path Redirects

The **Path Redirects** section allows you to configure redirects from an existing website path to another destination path.

Click **Edit** to configure or update path redirects.

Path Redirects CSV

The **Path Redirects CSV** option allows multiple path redirects to be configured using CSV-formatted data.

CSV Format

Each line represents one path redirect.

```
current-path,redirect-path
```

Example

```
products,products-list
about,company
contact,contact-us
```

Path Redirects Rules

The following rules must be followed while adding CSV data:

1. Data must be provided in **CSV format**.
2. Each new line is considered a separate path redirect.
3. The **Path** and **Redirect** values must be strings or numeric values.
4. The **Path** and **Redirect** must not start with `/`.
5. The **Path** must not be empty.
6. The **Path** and **Redirect** must be separated by a comma `,`.

Valid Example

```
old-page,new-page
products,products-list
services,our-services
```

Click **Save** to apply the configured redirects.

Configuration Summary

Settings	Descriptions
Title	Defines the website or page title.
Descriptions	Defines the website or page description.
Keywords	Defines relevant keywords for the website or page.
Open Graph: og:title	Defines the title used when the page is shared on supported platforms.
Open Graph: og:description	Defines the description used when the page is shared on supported platforms.
Path Redirects	Configures redirects between website paths.

Settings	Descriptions
Path Redirects CSV	Allows multiple path redirects to be added using CSV format.

Sign Out

Overview

The **Sign Out** feature allows users to securely log out of the VirtuBox backend. It ends the user's current session and helps prevent unauthorized access to the account.

2. Access Path

Console VirtuBox Backend → VirtuWeb → Sign Out

3. How to Sign Out

Follow these steps to sign out of the application:

1. Log in to the console VirtuBox backend.
2. Locate the **Sign Out** option in the interface.
3. Click **Sign Out**.
4. Wait for the application to end the current session.
5. Verify that you are redirected to the login page or another appropriate page.

4. Conclusion

The **Sign Out** feature helps protect user accounts by ending the active session and preventing unauthorized access after the user leaves the application.
