Assets

Overview

The **Assets** section in VirtuApp is used to manage and configure application assets, including app screen images, splash screen images, platform-specific app icons, splash screen videos, and app onboarding images.

1. Navigation Path

`Settings → VirtuApp → Assets`

2. Available Asset Sections

Section	Description	Available Action
App Screen Image	Used to configure the image displayed on the application screen.	Add Icon
Splash Screen Image	Used to configure the image displayed during the application launch screen.	Add Icon
Android App Icon	Used to configure the application icon for Android devices.	Add Icon
iOS App Icon	Used to configure the application icon for iOS devices.	Add Icon
Splash Screen Video	Used to configure a video for the application splash screen.	Add Video
App Onboarding Image	Used to configure images displayed during the application onboarding process.	Add Icon

3. Configuration Steps

1. Navigate to **Settings → VirtuApp → Assets**.

2. Identify the asset section you want to configure.
3. Click **Add Icon** for image and app icon sections.
4. Click **Add Video** to configure the splash screen video.
5. Select or upload the required asset, depending on the available options.
6. Complete any additional configuration fields displayed by the interface.
7. Save the configuration if a Save option is available.

4. Expected Behavior

- Each asset section allows configuration of a specific type of application resource.
- Android and iOS app icons can be configured separately.
- The splash screen can be configured with an image or video, depending on the supported functionality.
- App onboarding images can be configured independently.
- The configured assets should appear in their respective locations in the application after the changes are saved and applied.
