Audios

Overview

The **Response Audios** section displays all audio files that have been received as responses from a **Form**.

This section allows users to view and manage the response audio files generated within the project.

Copy to Project Files

Each response audio file includes a **Copy** option.

Clicking the **Copy** icon copies the selected response audio file to the project's **Audios** section. Once copied, the audio becomes available for use throughout the project wherever audio assets are supported.
