Basic

Overview

The **VirtuApp Basic** section is used to configure the basic settings of the VirtuApp application. It allows administrators to define the application name and manage the application's public access, login screen, and login skip settings.

Access Path

Access Path: VirtuBox → Settings → VirtuApp → Basic

VirtuApp Basic Settings

The VirtuApp Basic page contains the following configuration options:

1. App Name
2. Public
3. Login Screen Disabled
4. Login Skip Enabled

App Name

The **App Name** field allows administrators to specify the name of the VirtuApp application.

How to Configure App Name

1. Navigate to **VirtuApp → Basic**.
2. Enter the required application name in the **App Name** field.
3. Click the **Save** button.
4. Verify that the application name is saved successfully.

Public

The **Public** option allows administrators to change the public access setting of the application.

Click the **Public** button to change the setting.

The exact behavior depends on the application's public access configuration.

Login Screen Disabled

The **Login Screen Disabled** option controls whether the application login screen is disabled.

Click the button to change the setting.

- **Enabled:** The login screen is disabled.
- **Disabled:** The login screen is not disabled.

The current setting is displayed on the button.

Login Skip Enabled

The **Login Skip Enabled** option controls whether the application allows users to skip the login process.

Click the button to change the setting.

- **Enabled:** Login can be skipped, subject to the application's configuration.
- **Disabled:** Login skipping is not enabled.

How to Configure VirtuApp Basic Settings

Follow these steps to configure the basic application settings:

1. Open the VirtuBox backend.
2. Navigate to **Settings → VirtuApp → Basic**.
3. Enter the required application name.
4. Click **Save** to save the application name.
5. Configure the **Public** setting as required.
6. Configure the **Login Screen Disabled** setting.
7. Configure the **Login Skip Enabled** setting.
8. Verify that the selected settings reflect the intended application behavior.

Important Notes

- Save the application name after making changes.
- Review the login settings carefully before enabling or disabling them.
- Public access and login settings may affect how users access the application.
- Verify the application behavior after changing the configuration.

Conclusion

The **VirtuApp Basic** section provides the basic configuration options for the application name, public access, and login behavior. Administrators can use these settings to configure the application's accessibility according to their requirements.
