Documents

The **Documents** section allows you to upload and manage document files used throughout the project.

Document files can be added in either of the following ways:

- **Drag and Drop** – Drag one or more document files from your computer and drop them into the upload area.
- **Choose from Computer** – Click the upload area or the **Choose Files** button to browse and select document files from your computer.

After a document is uploaded, it becomes available for use in pages and other sections of the project where document assets are supported.

Revision #1
