Images

Overview

The **Response Images** section displays all image files that have been received as responses from a **Form**.

This section allows users to view and manage the response images generated within the project.

Copy to Project Files

Each response image includes a **Copy** option.

Clicking the **Copy** icon copies the selected response image to the project's **Images** section. Once copied, the image becomes available for use throughout the project, including pages, layouts, and other components that support image assets.
