Project Settings

Overview

The **Project Settings** section allows you to configure the project's basic information and default settings.

Publish Status

The **Publish Status** option allows you to publish or unpublish the project.

- **Published** – The project is live and available for use.
- **Unpublished** – The project is not publicly available.

Logo

The **Logo** field displays the logo currently assigned to the project. This logo is used to represent the project throughout the application.

Edit Logo

The **Edit Logo** option allows you to upload and set a new logo for the project.

Delete Logo

The **Delete Logo** option allows you to remove the currently assigned project logo.

Title

The **Title** field allows you to set or update the name of the project.

Slug

The **Slug** is a unique, URL-friendly identifier for the project. It is automatically generated by the system based on the project title and is used in the project's URL.

App Page

The **App Page** option allows you to select the page that will serve as the home page for the mobile application.

Web Page

The **Web Page** option allows you to select the page that will serve as the home page for the website.

Currency

The **Currency** option allows you to select the default currency used throughout the project for displaying monetary values.

Language

The **Language** option allows you to select the default language for the project.

The supported languages include:

- English
- Hindi
- German

Submit

The **Submit** button saves and applies all the changes made in the **Project Settings** section.
