Videos

The **Videos** section allows you to upload and manage video files used throughout the project.

Video files can be added in either of the following ways:

- **Drag and Drop** – Drag one or more video files from your computer and drop them into the upload area.
- **Choose from Computer** – Click the upload area or the **Choose Files** button to browse and select video files from your computer.

After a video is uploaded, it becomes available for use in pages, layouts and other sections of the project where video assets are supported.

Revision #1
