VirtuApp (Android) - Version 11.4

Android Release Notes

Build Version: 11.4
Release Date: 11 October 2026
Platform: Android
Release Type: Major Feature Release

Overview

This release introduces the **Connect Layout and Guest Meeting Scheduler** in VirtuApp. Guests can view available hosts and managers, select available meeting slots, send meeting requests, and manage their requests directly within the application.

The release also includes a **database migration from version 24 to version 25** to support the updated functionality.

Summary of Changes

Module	Change
Connect Layout	Added a new layout that displays hosts and managers associated with a page.
Meeting Scheduler	Enabled guests to select available hosts and schedule meetings using available time slots.
Guest API	Added guest functionality for viewing hosts, checking availability, and sending meeting requests.
Meeting Requests	Added support for meeting titles, descriptions, and cancellation.
Connect Request Management	Added a centralized view for managing sent, pending, cancelled, and completed meeting requests.

Module	Change
Connect Integration	Added support for accessing Connect through Footer, CTA, or Menu configurations.
Database	Migrated the database schema from version 24 to version 25.

Feature Details

1. Connect Layout

Added a new **Connect Layout** to VirtuApp that allows guests to view hosts and managers associated with a page and initiate meeting requests.

Configuration

1. Open the VirtuApp Console.
2. Navigate to **Pages**.
3. Open the required page.
4. Select the layout configuration option.
5. Choose the **Connect Layout**.
6. Configure the layout header and description.
7. Save the page configuration.

Behavior

- The Connect Layout displays the hosts and managers associated with the configured page.
- The layout header and description can be customized through the console.
- Guests can select an available host to view their meeting slots and initiate a meeting request.

---

2. Guest Meeting Scheduler

Introduced meeting scheduling functionality for the **Guest** user type in the Connect module.

Guests can select a host, choose an available meeting slot, provide meeting details, and send a meeting request.

Meeting Scheduling Flow

1. Open a page containing the Connect Layout.
2. View the hosts and managers associated with the page.
3. Select a host who is logged in to the application and is not paused.
4. View the host's available meeting slots.
5. Select the required time slot.
6. Continue to the meeting details screen.
7. Enter the meeting title and description.
8. Submit the meeting request to the selected host.

Behavior

- Guests can initiate requests with eligible hosts.
- Hosts who are paused or not logged in are not available for selection, according to the availability rules.
- Available meeting slots are displayed for the selected host.
- Guests can select a suitable slot and submit meeting details.
- The meeting request is sent to the selected host for further action.
- Guests can cancel a meeting request when cancellation is supported for its current status.

---

3. Meeting Request Management

Added a centralized **Connect** section where guests can view and manage their meeting requests.

The Connect section can be accessed through a configured **Footer, CTA, or Menu** entry point.

Configuration

1. Open the VirtuApp Console.
2. Navigate to the relevant Footer, CTA, or Menu configuration.
3. Add the **Connect** type.
4. Save the configuration.

Request Information

The Connect section provides access to the guest's meeting requests, including the following statuses:

- **Pending Requests:** Requests awaiting further action.
- **Sent Requests:** Requests submitted to hosts.
- **Cancelled Requests:** Requests that have been cancelled.
- **Completed Meetings:** Requests associated with completed meetings.

Available Actions

- View meeting request details.
- Review the status of submitted requests.
- Cancel eligible meeting requests.
- Delete requests that the guest no longer wants to keep, where supported.

This provides guests with a centralized place to track their meeting requests without returning to the original Connect Layout.

---

4. Guest API Integration

Added Guest API integration to support the new Connect Layout and meeting scheduling workflow.

Supported Functionality

- Retrieve hosts and managers associated with a page.
- Retrieve host availability and meeting slots.
- Submit meeting requests with a title and description.
- Support meeting request cancellation.
- Retrieve meeting requests for the Connect section.
- Support request management based on the available request actions and statuses.

The new API integration connects the guest-facing interface with the Connect module's meeting scheduling functionality.

---

5. Database Migration: Version 24 to Version 25

Updated the application database from **version 24 to version 25** to support the new Connect and meeting scheduler functionality.

Migration Details

Item	Details
Previous Database Version	24
New Database Version	25
Migration Type	Database version upgrade
Purpose	Support the updated Connect and meeting scheduler functionality

The application uses the updated database version in this release. Existing installations should follow the migration logic implemented in the application.

Release Summary

New Features

- Added the Connect Layout for displaying page-associated hosts and managers.
- Added customizable headers and descriptions for the Connect Layout.
- Added guest host selection and meeting slot selection.
- Added meeting scheduling with titles and descriptions.
- Added meeting request cancellation.
- Added a centralized Connect section for viewing and managing meeting requests.
- Added Connect entry points through Footer, CTA, and Menu configurations.
- Added Guest API integration for meeting scheduling and request management.

Database

- Migrated the application database from version 24 to version 25.

Backward Compatibility

Item	Details
Supported Platform	Android

Item	Details
Minimum Build for New Features	VirtuApp Android 11.4
Existing Projects	Can use the new functionality after the required console configuration
Connect Layout	Requires configuration through the VirtuApp Console
Connect Entry Points	Must be configured through Footer, CTA, or Menu as required
Database Migration	Version 24 to version 25
Existing Configurations	Should be validated against the updated application and migration logic

Existing projects can adopt the new Connect Layout and guest meeting scheduler by configuring the required layouts and entry points in the VirtuApp Console. The database migration must be applied through the application's implemented migration logic before relying on the updated database structure.
