VirtuApp(iOS) - Version 11.3

iOS Release Notes

Version: 11.3
Release Date: 12 October 2026
Platform: iOS
Update Type: New Features & Bug Fixes

Overview

This update introduces the **Meeting Scheduler** to VirtuApp! You can now easily set up meetings, manage your availability, and handle meeting requests. We've also made the app much faster, switched to a simpler 12-hour time format, and fixed annoying bugs that caused the screen to jump or buttons to freeze.

Summary of Changes

Area	What's New
Meeting Hub	Added a new "Connect" screen with dedicated tabs for your upcoming meetings and pending requests.
Availability Management	Hosts and Managers can now create, edit, hide, and pause their available time slots.
Easy Filtering	Added a date slider and status filters (Pending, Accepted, Canceled, Completed) to easily find specific meetings.
Instant Updates	When you accept a request, it instantly moves to your "My Meetings" tab without making you wait.
Reliable Settings	Fixed a bug so your "Published" or "Hidden" availability settings always save accurately.
Smoother Screens	Fixed an issue where the app would forget which date you were looking at while refreshing in the background.
Button Fixes	Fixed errors that happened if you accidentally double-tapped the Accept, Decline, or Cancel buttons.

Feature Details & Fixes

1. Meeting Scheduler

Introduced a brand-new space designed to make scheduling easy for everyone.

- **Smart Roles:** The app automatically knows if you are a Guest, Host, or Manager and shows you the right tools for your account.
- **Organized Tabs:** Seamlessly switch between your confirmed meetings and new requests waiting for your reply.
- **Quick Date Finder:** Scroll through dates horizontally to find exactly what you're looking for.
- **Familiar Times:** All meeting times are now displayed in a simple 12-hour format (like 2:00 PM) so they are easy to read at a glance.

---

2. Managing Your Time (For Hosts & Managers)

Provided Hosts and Managers with a dedicated menu to control exactly when people can book time with them.

- **Create & Edit Slots:** Easily set up your available times, dates, and what the meetings are for.
- **Show or Hide:** Choose whether to publish your available times for others to see, or hide them temporarily.
- **Pause Everything:** Need a break? Use the global "Pause" button to temporarily stop all incoming meeting requests.

---

3. Bug Fixes & A Smoother Experience

- **No More Waiting:** Accepting a meeting feels instant. The card immediately updates and moves to the right tab without freezing the screen with a loading spinner.
- **Reliable Buttons:** Tapping "Accept," "Decline," or "Cancel" now shows a small loading animation. This prevents accidental double-taps and errors while the app updates your schedule.

- **No More Screen Jumping:** We fixed a bug that would randomly jump you back to the current day while you were looking at future dates. The app now remembers your spot perfectly when refreshing data.

Compatibility

Item	Details
Supported Platform	iOS (iPhone & iPad)
Existing Projects	Fully compatible with this new version
Action Required	Just update the app! No extra steps needed.
Your Settings	Everything will continue to work exactly as you left it.

Backward Compatibility

You don't need to worry about losing anything. VirtuApp iOS Version 11.3 works perfectly with your existing account. All your previous settings and account permissions have been seamlessly carried over to the new Meeting Scheduler.

Release Summary

New Features & Enhancements

- Added a new Connect section to view and manage all meetings.
- Added tools for Hosts and Managers to create and control their available time slots.
- Accepting a meeting now instantly moves it to your confirmed list.
- Meeting times are now easier to read with a standard 12-hour format.

Bug Fixes & Improvements

- Fixed a bug where availability settings (Published/Hidden) weren't saving correctly.
- Stopped the screen from jumping back to today's date when the app refreshes in the background.
- Fixed glitches caused by double-tapping action buttons.

Compatibility

- Fully supported on iOS with no extra setup required.
