VirtuApp(iOS) - Version 11.5

iOS Release Notes

Version: 11.5
Release Date: 13 October 2026
Platform: iOS
Update Type: New Features & Bug Fixes

Overview

This update brings powerful new scheduling tools specifically for **Hosts and Managers** in VirtuApp, making it easier than ever to coordinate meetings. We've also packed this release with important fixes—making buttons more responsive, ensuring your schedule saves correctly, and fixing a bug so areas on the 3D map show up exactly as they should.

Summary of Changes

Area	What's New
Meeting Scheduler	Added special menus and tools specifically designed for Hosts and Managers.
Reliable Tools	Fixed an error that sometimes popped up when Managers tried to load or update schedules.
Accurate Availability	Fixed a glitch so when a Host updates their free time, it instantly saves and shows up correctly.
Smoother Buttons	Fixed an issue where the "Cancel" or "View" buttons on guest meeting cards were hard to tap or slow to respond.
3D Map Fix	Fixed a bug where colored zones or drawn shapes were missing from the 3D map.

Feature Details & Fixes

1. Meeting Scheduler (Host & Manager Tools)

We've introduced a personalized experience depending on your role. Hosts and Managers now have their own set of tools to organize their time, without cluttering the screen for regular Guests.

How to use the new Host/Manager features:

1. Open the app and navigate to the **Connect** screen.
2. The app will automatically detect your role. If you are a **Host or Manager**, you will see a new **"My Availability"** button at the top.
3. Tap **"My Availability"** to open your scheduling dashboard.
4. From here, you can easily add new time slots, edit existing ones, or pause your schedule to review incoming requests. *(Regular Guests will not see this menu and will jump straight to booking).*

Behind-the-scenes improvements:

- **No More Errors:** We fixed a frustrating bug that caused an error screen when Managers tried to approve requests or change settings.
- **Perfect Syncing:** When a Host changes their available time, the app now perfectly syncs that change so it updates instantly for everyone else.

---

2. Bug Fixes & A Smoother Experience

- **Better Button Taps:** We noticed the buttons on meeting cards (like Cancel or View) were sometimes ignoring your taps or taking a second to react. We've made these buttons much more responsive and easier to press.
- **Visible Map Zones:** We resolved an issue on the 3D map where designated shapes, zones, or marked areas were completely invisible. Everything will now render on your map exactly as intended.

Compatibility

Item	Details
Supported Platform	iOS (iPhone & iPad)
Existing Projects	Fully compatible with this new version
Action Required	Just update the app! No extra steps needed.
Your Settings	Everything will continue to work exactly as you left it.

Backward Compatibility

You don't need to worry about losing any data or map settings. VirtuApp iOS Version 11.5 works perfectly with your existing account. Just download the update, and your profile, scheduled meetings, and map details will be right where you left them.

Release Summary

New Features & Enhancements

- Added dedicated scheduling workflows and menus for Host and Manager accounts.
- Included simple steps for Hosts/Managers to access their new availability tools.

Bug Fixes & Improvements

- Fixed an error that interrupted Managers while organizing meetings.
- Fixed a syncing issue so Host time slots update reliably.
- Improved the touch sensitivity on Guest meeting cards so buttons work on the first tap.
- Fixed a bug on the 3D map to ensure all shapes and zones are visible.

Compatibility

- Fully supported on iOS with no extra setup or account changes required.
